

STANDARD OPERATING PROCEDURE

Innovatiview Verification Portal

Operating and administering the multi-tenant biometric identity verification platform for Indian examination boards.

DOCUMENT ID	SOP-VP-001
VERSION	1.0
DOCUMENT OWNER	Head of Platform
APPROVED BY	Head of Platform - Compliance
CLASSIFICATION	Internal
DISTRIBUTION	All engagement teams

1.0 Policy

Innovatiview represents the Verification Portal to prospective customers in a way that protects prospect data, sets accurate expectations of the product, and hands over cleanly to the Platform team once a contract is signed. This engagement work sits ahead of live operation and is distinct from it.

2.0 Purpose

This SOP standardises how the team engages with prospective customers so that:

- Every prospect gets the same quality of demo and technical discovery regardless of who runs the session.
- Every pilot / proof-of-concept is scoped, delivered, and closed out on a defined timeline.
- Every won deal transitions to the Platform team with the same package of prospect context, sign-offs, and configuration.
- No prospect commitment is made that cannot be delivered by the Platform team post-close.

3.0 Scope

This SOP applies to:

- All prospect engagement for the Innovatiview Verification Portal - exam-board sales cycles, institute-level pilots, RFP responses.
- All staff running a technical or commercial conversation with a prospect.
- The full lifecycle from initial qualification through post-close handover to the Platform team.

4.0 Responsibilities

Role	Primary responsibility
Engagement Lead	Owns this SOP. Approves demo environments, pilot scoping, and post-close handover.
Solutions Engineer	Runs technical demos, discovery sessions, and pilot setup on the sandbox environment. First technical contact for the prospect.
Account Executive	Owns the commercial relationship. Coordinates timing of demos, pilots, and legal review. Signs off on any commitment made to the prospect.
Platform Team	Receives the post-close handover. Not involved before handover except when consulted for a technical question the Solutions Engineer cannot answer.
Compliance	Signs off on any data-handling commitment made to the prospect and on the pilot-close disposal step.

Detailed decision authority is captured in § 11 (Approvals matrix).

5.0 Definitions

Term	Meaning
Prospect	An exam board or institute engaged in a sales conversation, before a contract is signed.

Term	Meaning
Sandbox	A demo-and-pilot Data Plane the Solutions Engineer uses to show the product live. Fully isolated from production.
Pilot / POC	A time-boxed evaluation where the prospect runs real (or synthetic) candidates through the Verification Portal on the sandbox.
Discovery	The structured technical conversation that captures the prospect's exam scale, biometric requirements, KYC review preference, and integration constraints.
Discovery Pack	The written summary of the discovery session - the artefact handed to the Platform team at post-close handover.
Handover	The formal transition from the engagement team to the Platform team once a contract is signed.
Exam board	The customer type that runs verifications for its own examinations - e.g. NTA, SSC, UPSC.
Institute	A university or college that enrolls candidates through an exam board on the Verification Portal.
Review mode	The KYC review rule chosen at exam-board level: Admin (Innovatiview reviews), Client (the board reviews), Both (both, in sequence).
Verification agent	The end-user on exam day who scans candidates and runs biometric matches.
Wallet	The prepaid balance model that debits per candidate lookup and per biometric match. Relevant to commercial framing.

6.0 Procedure

The engagement workflow has six standard stages. Each stage is a self-contained subsection with prerequisites, steps, and outcome criteria.

6.1 Prospect qualification

Prerequisites

- Inbound lead or Account Executive introduction has landed.
- Basic prospect context: organisation name, scale of examinations, geography.

Procedure

Step	Actor	Action
1	Account Executive	Records the lead in the CRM and forwards the summary to the Solutions Engineer.
2	Solutions Engineer	Reviews the summary; drafts three qualifying questions covering annual exam volume, current identity-verification method, and preferred KYC review model.
3	Account Executive	Runs the qualification call. Captures answers and any regulatory or procurement constraints.
4	Solutions Engineer	Records a Go / No-Go recommendation in the CRM opportunity.
5	Account Executive	Decides whether to progress to Discovery (§ 6.2) or close as unqualified with a written reason.

Outcome

- CRM opportunity is either progressed to Discovery or closed with a documented reason.

6.2 Discovery and demo

Prerequisites

- Prospect is Qualified.
- Demo slot is booked with named attendees.

Procedure

Step	Actor	Action
1	Solutions Engineer	Refreshes the sandbox with a clean dataset (see § 6.3 Prerequisites).
2	Solutions Engineer	Runs the standard demo flow: institute registration -> KYC review -> verification-agent enrolment -> live candidate verification (face + fingerprint).
3	Solutions Engineer	Runs the discovery questionnaire covering: annual exam count, candidate count per exam, biometric requirements (face / fingerprint / iris), KYC review preference, integration touchpoints, data-residency requirements.
4	Account Executive	Captures commercial signals: budget, decision timeline, competing options.
5	Solutions Engineer	Writes the Discovery Pack summarising both the technical and commercial answers, and uploads it to the CRM opportunity within one business day.

Outcome

- Discovery Pack is filed in the CRM.
- The prospect has seen a working end-to-end demo and can articulate the product's fit for their use case.

6.3 Pilot / POC provisioning

Prerequisites

- Discovery Pack is filed.
- Mutually agreed pilot scope (candidate count, duration, success criteria) is captured in a Pilot Agreement, signed by the prospect and countersigned by the Engagement Lead.
- Compliance has signed off on any prospect-supplied data that will land on the sandbox.

Procedure

Step	Actor	Action
1	Solutions Engineer	Creates a pilot workspace on the sandbox Data Plane. Uses the standard pilot template so no bespoke changes are needed.
2	Solutions Engineer	Registers the prospect as a Pilot institute; walks their point-of-contact through the KYC flow live.
3	Solutions Engineer	Enrols a small set of pilot verification agents nominated by the prospect.
4	Solutions Engineer	Runs a joint smoke test with the prospect: one full candidate verification end-to-end.
5	Solutions Engineer	Hands over the pilot access details and a written pilot brief (dates, success criteria, support contact, disposal date).

Outcome

- Pilot is live on the sandbox with a fixed start and end date.

- The prospect can run pilot candidates without further engagement-team intervention.

6.4 Pilot support

Prerequisites

- Pilot is live (§ 6.3).

Procedure

Step	Actor	Action
1	Solutions Engineer	Checks the pilot dashboard weekly; captures throughput, match-rate, wallet consumption.
2	Solutions Engineer	Runs a mid-pilot review call to surface friction points and confirm the success criteria are on track.
3	Solutions Engineer	Escalates any technical blocker to the Platform team through the internal engagement channel. Never gives the prospect a Platform-team contact directly.
4	Account Executive	Maintains the commercial conversation in parallel: pricing questions, contract terms, procurement paperwork.

Outcome

- Pilot progresses to a Close call with either a Go decision or a documented reason to walk away.

6.5 Pilot close and disposal

Prerequisites

- Pilot end date reached (or a decision made to end it early).

Procedure

Step	Actor	Action
1	Solutions Engineer	Convenes the Close call with the prospect. Reviews results against the Pilot Agreement's success criteria.
2	Account Executive	Captures the decision: Go (progress to contract), Extend (revise the agreement), or Close (no fit).
3	Solutions Engineer	On any outcome, disables all pilot agents and removes the pilot institute from the sandbox within five business days of the Close call.
4	Compliance	Confirms that all prospect-supplied data (KYC documents, candidate photos, personal identifiers) has been purged from the sandbox and its object storage.
5	Solutions Engineer	Files the Close Report on the CRM opportunity, including the disposal confirmation.

Outcome

- The pilot is fully wound down.
- No prospect data remains on the sandbox after Compliance sign-off.

6.6 Post-close handover

Prerequisites

- Signed contract is in place.
- Kick-off date agreed with the prospect (now the client).

Procedure

Step	Actor	Action
1	Account Executive	Notifies the Platform team's intake contact that a new client is ready for onboarding.
2	Solutions Engineer	Prepares the Handover Pack: Discovery Pack, Pilot Agreement, Close Report, agreed KYC review mode, agreed data-residency scope, verification-window commitments, wallet pricing, any bespoke terms.
3	Solutions Engineer + Platform Team	Runs a handover call. Walks the Platform team through every entry in the Handover Pack.
4	Engagement Lead	Signs off the handover in the CRM.
5	Platform Team	Assumes responsibility. All future technical execution is theirs; the engagement team exits the working thread.

Outcome

- The client is transitioned from a engagement opportunity to a Platform-team engagement.
- engagement role narrows to the post-sale relationship touchpoints (quarterly reviews, expansion) that fall under Account Management.

7.0 Effectiveness Criteria

The following metrics track SOP effectiveness. Engagement Lead reviews them monthly; deviations trigger a coaching or process review.

Metric	Target	Data source
Qualified-to-Demo conversion	>= 70 %	CRM opportunity stages
Discovery Pack filed within 1 business day of demo	>= 95 %	CRM audit
Pilot-to-signed-contract conversion	>= 40 %	CRM opportunity stages
Pilot disposal completed within 5 business days of Close call	100 %	Compliance log
Handover Pack completeness (spot check)	100 % of fields populated	Quarterly Engagement Lead review
Prospect satisfaction (post-demo survey)	>= 4.2 / 5	Post-demo survey
Prospect data purged after pilot close	100 %	Compliance sign-off

8.0 Records

The following records are generated by executing this SOP.

Record	Where kept	Retention
CRM opportunity + stage history	CRM	7 years post-close
Discovery Pack	CRM opportunity attachment	7 years
Pilot Agreement (signed)	Contract repository	10 years

Record	Where kept	Retention
Pilot dashboard snapshots	Shared drive	5 years
Close Report	CRM opportunity attachment	7 years
Compliance disposal sign-off	Compliance ledger	10 years
Handover Pack	CRM opportunity attachment + shared with Platform team	7 years

9.0 Escalation

Situation	First contact	If unresolved in
Prospect asks for a commitment outside standard terms	Solutions Engineer	Same day -> Account Executive -> Engagement Lead
Technical question the Solutions Engineer cannot answer	Solutions Engineer	1 business day -> Platform team via internal engagement channel
Prospect reports a defect on the sandbox	Solutions Engineer	Same day -> Platform team
Pilot slipping the agreed end date	Solutions Engineer	3 business days -> Account Executive + Engagement Lead
Suspected data-handling concern raised by prospect	Solutions Engineer	Immediate -> Compliance + Engagement Lead
Bespoke commercial ask (custom pricing, custom feature commit)	Account Executive	Same day -> Engagement Lead

Any escalation is logged on the CRM opportunity even if resolved before reaching the next level.

10.0 Compliance and Handover

- No prospect-supplied data may be moved from the sandbox to any other environment. If a prospect requests it, the request is escalated to Compliance.
- No promise about the platform's technical behaviour is made to a prospect unless it is verifiable in a live demo or explicitly agreed with the Platform team in advance.
- Every pilot ends with a Compliance sign-off that prospect data has been purged from the sandbox.
- The Handover Pack is the single source of truth for post-close configuration. Anything not in the Handover Pack is not a commitment.

Quarterly, Engagement Lead and Compliance jointly review a random sample of five closed opportunities to confirm each ended with a proper disposal and a complete Handover Pack (or a documented reason for its absence). Findings feed the next leadership review.

11.0 Approvals Matrix

Action	Approver
Progress a Qualified prospect to Discovery	Account Executive
Book a demo on the sandbox	Solutions Engineer

Action	Approver
Provision a Pilot	Engagement Lead + Compliance
Any bespoke commercial commitment to a prospect	Engagement Lead
Any bespoke technical commitment to a prospect	Engagement Lead + Platform Team
Extend a pilot past its agreed end date	Engagement Lead
Close a prospect as No Fit	Account Executive
Sign off the Handover Pack	Engagement Lead
Amend this SOP	Owner + all Approvers listed on the cover

Document control: The electronic copy under docs/sop/ in the platform repository is the authoritative version. Printed copies are uncontrolled and expire on the date of printing. Any proposed change must be submitted through a change request tagged sop - vp and approved by the Owner and Approvers listed on the cover.

End of SOP-VP-001 v1.0.
